

Please find the attached memorial submission images. The interior walls are clear acrylic walls with the names of those who have gave their lives during the two wars. Each five sided section represents each service branch with the names and interior sculptures focused on the corresponding service branch. The total height of the monument is approximately 116' with the base falling within the design parameters. The structure would be built of steel, with an epoxy coating for durability and finish. Color to match it's Middle Eastern architectural design.

The center arbor features a single fallen soldier sculpture as a place to reflect and honor each service branch.

Please let me know if you have any other questions or comments as I would be more than happy to implement any elements that you think need to be included. I would flush out the design once the initial concept is approved.

Thank you for your time,

Eric K. Olson
